Speeds and Feeds for **1010** style end mills. Solid carbide 4 flute fine pitch rougher with TIALN coating. End Mills are made in the USA.

* please use our 3 flute rougher with high helix series 1011

Feed Per Tooth is based on.....

**sloting** depth of 1.0 x Cutting Diameter, for deeper slotting reduce feed and speed  
**profiling** with Axial depth up to 2x Cutting Diameter and Radial Depth of .25 x Cutting Diameter,  
when profiling less than .25 cutting diameter increase feed and speed

When using long flute length roughers reduce SFM and Feed Per Tooth accordingly. Normally SFM only 10-20%, but Feed Per Tooth should be reduced 30-60%.

### 6 guidelines for best cutting results

| keep overall gage length short | keep tool concentricity low | climb milling is generally best |
| workpiece rigidity is important | avoid double cutting chips | avoid thermal shock |

**Note**: Cutting speeds, feeds, and lubrication data are given as starting values only. Parameters should be varied to suite your particular conditions. MariTool is constantly improving products, tolerances, and reliability. As such, these speeds and feeds are subject to change without prior notice. Cutting tools may shatter and or produce dangerous fumes when being used. Appropriate protection is advised.
